You will get battery statistics, monitor battery usage, fix problems, adjust the general settings and so much more. You can also set a schedule to get the battery.Q: Preprocessor macro adding string data In c++ is it possible to add data to a preprocessor macro? I have a preprocessor macro which is defining a bunch of data members of a class. I need to add a constructor to the class so I can call the constructor right at the point of defining the struct. I have read lots of preprocessor stuff, but nothing on adding data to a preprocessor macro and so can't see how it can be done. Any help greatly appreciated. Edit: #define MACRO(a,b) a##b struct MyStruct{ int a; int b; MACRO(a,b) string c; }; int main(){ MyStruct s; s.c = "asdf"; // compile 79a2804d6b
